

Ubuntu & Shell Script Commands Cheat Sheet

1. Basic File & Directory Operations

<code>pwd</code>	# Print working directory
<code>ls</code>	# List directory contents
<code>ls -l / -a</code>	# Long list / show hidden
<code>cd /path/to/dir</code>	# Change directory
<code>mkdir new_dir</code>	# Create new directory
<code>touch file.txt</code>	# Create new file
<code>cp src dest</code>	# Copy file/folder
<code>mv old new</code>	# Rename/move
<code>rm file.txt</code>	# Delete file
<code>rm -r dir</code>	# Delete directory recursively
<code>cat file.txt</code>	# Print file contents
<code>nano file.txt</code>	# Open file in nano editor

2. Search & Locate Files

<code>find / -name file.txt</code>	# Find file
<code>find . -type f -size +10M</code>	# Files larger than 10MB
<code>grep "text" file.txt</code>	# Search in file
<code>grep -r "text" /path</code>	# Recursive grep
<code>locate filename</code>	# Quickly locate files
<code>which python3</code>	# Path of executable
<code>whereis ls</code>	# Binary and man page location

3. Package Management (APT)

<code>sudo apt update</code>	# Update package list
<code>sudo apt upgrade</code>	# Upgrade packages
<code>sudo apt install pkgname</code>	# Install package
<code>sudo apt remove pkgname</code>	# Remove package
<code>sudo apt autoremove</code>	# Remove unused packages
<code>dpkg -i file.deb</code>	# Install .deb file
<code>dpkg -l</code>	# List installed packages

4. User & Permissions

<code>whoami</code>	# Current user
<code>sudo su</code>	# Become root
<code>adduser newuser</code>	# Add user

Ubuntu & Shell Script Commands Cheat Sheet

passwd newuser	# Set password
chmod 755 file.sh	# Set execute permissions
chown user:group file	# Change ownership

5. Process Management

ps aux	# List all processes
top	# Realtime process view
kill PID	# Kill by PID
killall process_name	# Kill by name
bg / fg	# Background / foreground
jobs	# Show jobs

6. Networking

ifconfig / ip a	# Show IP config
ping google.com	# Ping host
netstat -tulnp	# Listening ports
curl https://example.com	# Fetch web content
wget http://example.com/file	# Download file
scp file user@host:/dest	# Secure copy

7. Shell Script Essentials

```
#!/bin/bash
name="Alice"
echo "Hello $name"

read -p "Enter name: " user
echo "Welcome $user"

if [ $age -ge 18 ]; then
    echo "Adult"
else
    echo "Minor"
fi

for i in {1..5}; do
    echo "Item $i"
done
```

Ubuntu & Shell Script Commands Cheat Sheet

```
greet() {  
    echo "Hi $1"  
}  
greet "Bob"
```

```
x=5; y=3  
echo $((x + y))    # 8
```
